

Who We Are

WhyCrew is a development-first technology partner specializing in secure, production-ready solutions. We build scalable systems across AI, cybersecurity, and product development—transforming ideas into deployable products that work in real environments.

What We Build

Product Development

- End-to-end MVP → Production
- Web, mobile & SaaS platforms
- AI-powered automation & workflows
- Custom integrations & APIs

Cybersecurity

- Penetration testing & audits
- SOC setup & threat detection
- Compliance & 24/7 monitoring
- Incident response automation

Selected Projects & Solutions

ML-Based NetFlow & Sysmon Correlation Engine

Built ML system correlating network and endpoint data for behavioral threat detection, enabling early-stage anomaly detection and lateral movement analysis with high-volume data pipelines.

Next-Generation HRMS Platform

Enterprise SaaS with employee lifecycle management, workflows, analytics, role-based access, and audit trails. Designed for multi-tenant scale.

SOAR Platform (Security Orchestration & Response)

Automated incident response with playbooks for alerts, escalation, and remediation. Reduced manual analyst workload by 80%.

Threat Intelligence Platform

Aggregates multiple feeds with IOC tracking, enrichment, and correlation. Supports proactive defense and investigation.

Attack Surface Management Platform

Continuous monitoring of exposed assets, services, and misconfigurations across external perimeter.

Phishing Simulation & Security Awareness

Custom phishing campaigns with tailored templates, behavior tracking, and measurable training effectiveness.

Azure & AD Blast Radius Monitoring

Maps attack paths in Azure/on-prem environments to reduce privilege abuse and lateral movement risk.

Dark Web Exposure Monitoring

Monitors dark web for leaked credentials and data, enabling proactive remediation before incidents escalate.

Case Management System for Security Teams

Centralized platform for investigations with evidence tracking, workflow automation, and real-time stakeholder notifications.

Email Security Training Plugin

Plugin-based awareness solution tracking engagement, learning effectiveness, and compliance reporting.

Automation & Integrations

- Zoho CRM customization & workflow automation
- WhatsApp-based real-time notifications
- API integrations for alerting and operational visibility
- Custom dashboards and reporting systems

How We Work

Discover → Design → Build → Deploy

Agile execution with transparent communication, realistic timelines, and security-first development. Typical MVP delivery: 8-12 weeks.

Who We Serve

- Founders validating security/SaaS ideas
- Tech professionals building side ventures
- Startups scaling MVPs to production
- Enterprises modernizing legacy systems
- Security teams automating operations

Engagement Models

MVP Development: 8-12 weeks fixed scope from idea to deployed product

Dedicated Team: Monthly retainer for extended product development

Feature Build: Per-feature pricing for specific enhancements

Security Audit: Project-based assessment and remediation

Why WhyCrew

- Development-first with security embedded at every stage
- Production-ready systems, not prototypes or demos
- Strong AI/ML expertise with practical implementations
- Flexible engagement models and transparent communication
- Realistic timelines with agile, iterative execution
- Proven track record across industries and use cases

Technology & Expertise

Python, ML frameworks, React, Node.js, Kubernetes, Docker, cloud platforms (AWS/Azure/GCP), DevOps pipelines, security tools (Burp Suite, Semgrep, SonarQube), threat intelligence platforms, and comprehensive monitoring systems.

Next Steps

Whether you're validating a new idea, scaling an MVP, or need security expertise—let's discuss how WhyCrew can accelerate your goals with production-ready solutions.
